Isolating amplifier unipolar/bipolar

For electrically insulating, amplifying and converting DC signals

CE

Application

The purpose of the isolating amplifier **SIRAX TV 808** (Fig. 1) is to electrically insulate input and output signals, respectively to amplify and/or change the signal level or type (current or voltage) of the input signals.

The instrument fulfils all the important requirements and regulations concerning electromagnetic compatibility **EMC** and **Safety** (IEC 1010 resp. EN 61 010). It was developed and is manufactured and tested in strict accordance with the **quality assurance standard** ISO 9001.

The device has two channels and provides two independent isolating amplifiers in an extremely small space. The user has a wide choice of input and output ranges and can set the desired one with the aid of soldered jumpers and potentiometers.

A version with one input and two outputs is available that enables two electrically insulated outputs to be obtained from a single input signal.

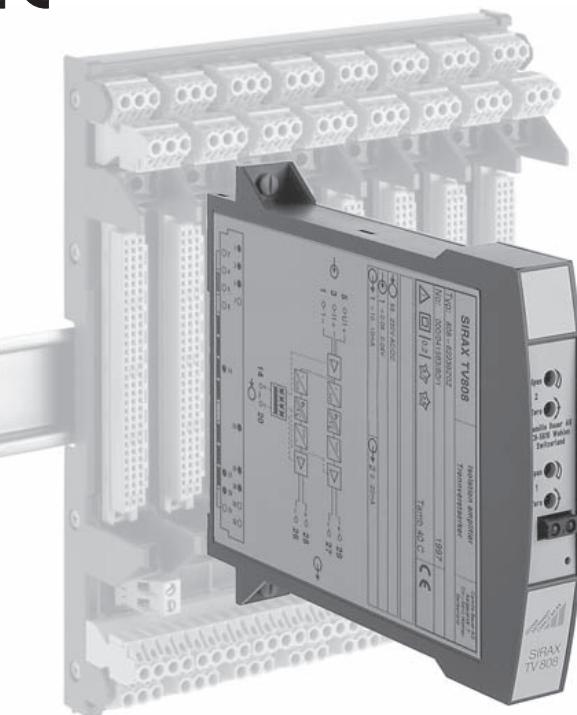

Fig. 1. Plug-in module SIRAX TV 808-62 for plugging onto backplane BP 902.

Variants

- 252 standard input and output combinations selected by soldered jumpers
- User-specific input and/or output ranges
- Isolating amplifier with one input and two electrically insulated outputs
- Power supply 24...60 V DC/AC or 85...230 V DC/AC

Please request our data sheet TV 808-61 Le for single-channel versions.

Features / Benefits

- Isolating amplifier plugs onto backplane (mechanically latched by fasteners), all electrical connections made to the backplane and not to the SIRAX TV 808 / Thus no wiring when replacing devices
- Electric insulation between inputs, outputs (2.3 kV) and power supply 3.7 kV / Prevents measurement errors due to potential leakage
- Flexibility provided by more than 250 different input and output combinations selected by simply positioning soldered jumpers / Reduced stocking
- Non-standard user-specific ranges available
- AC/DC power supply / Universal

Standard versions

Inputs and outputs set to 0...20 mA. Any of the standard ranges given in the Section "Technical data, measuring inputs" are simply selected by positioning soldered jumpers. The fine adjustment is accomplished using the potentiometers "Zero" and "Span".

Installation data

Housing:	Isolating amplifier in housing B17 for plugging onto backplane BP 902. Refer to Section "Dimensional drawing" for dimensions
Material of housing:	Lexan 940 (polycarbonate) flammability class V-0 acc. to UL 94, self-extinguishing, non-dripping, free of halogen
Designation:	SIRAX TV 808
Mounting position:	Any
Electrical connections:	96-pin connector acc. to DIN 41 612, pattern C Layout see Section "Electrical connections"
Coding:	Isolating amplifier supplied already coded. The rack is coded by the user by fitting the coding inserts supplied
Weight:	Approx. 0.18 kg

Electrical insulation:

All circuits (measuring input / measuring output / power supply) are electrically insulated

Regulations

Electromagnetic compatibility:	The standards DIN EN 50 081-2 and DIN EN 50 082-2 are observed
Protection (acc. to IEC 529 resp. EN 60 529):	Housing IP 40 Terminals IP 00
Electrical standards:	Acc. to IEC 1010 resp. EN 61 010
Operating voltages:	< 300 V between all insulated circuits
Contamination level:	2
Overvoltage category acc. to IEC 664:	III for power supply II for measuring input and measuring output
Double insulation:	– Power supply versus all other circuits – Measuring input versus measuring output

Environmental conditions

Climatic rating:	Climate class 3Z acc. to VDI/VDE 3540
Commissioning temperature:	– 10 to + 55 °C
Operating temperature:	– 25 to + 55 °C
Storage temperature:	– 40 to + 70 °C
Annual mean relative humidity:	≤ 75%

Configuration

1. Standard input ranges

Soldered jumpers are provided for the coarse setting of the input ranges and the fine adjustment is accomplished using the potentiometers "Zero" and "Span".

100 must be added to the designations of the soldered jumpers in the table for channel 1 and 200 for channel 2.

(Example: Input range for input 1 and input 2 = 0...20 mA. Jumpers 1, 5, 6 and 11 must be inserted for this range.

- The corresponding jumpers for channel 1 are B 101, B 105, B 106 and B 111.
- The corresponding jumpers for channel 2 are B 201, B 205, B 206 and B 211).
